Subaru of Indiana Automotive, Inc.
5500 State Road 38 E
Lafayette, IN 47905

Dear Hiring Manager,

Dear Hiring Manager,

I am excited to apply for the Data Analytics Developer position at Subaru of Indiana Automotive. As a Statistics major at the University of Illinois at Urbana-Champaign, with minors in Mathematics and Data Science, I am passionate about leveraging data to drive better decision-making and operational efficiency. The opportunity to apply my technical skills in SQL, Python, ETL, and data visualization within a dynamic manufacturing environment is an exciting prospect, and I believe my background makes me a strong fit for this role.

In my role as an AI/ML Intern Team Leader, I worked with large datasets (100,000+ entries), developed predictive models, and automated ETL pipelines using Python and SQL. I collaborated with cross-functional teams to extract, transform, and analyze data to support business insights—an experience that aligns closely with Subaru's focus on building and maintaining data analysis solutions for decision-making.

Additionally, as a Consultant at Illinois Business Consulting, I worked on data-driven business strategy projects, helping clients optimize operational efficiency through data analytics. My work involved aggregating and analyzing large datasets, designing dashboards, and delivering insights to stakeholders, strengthening my ability to translate raw data into actionable business intelligence.

Beyond my recent roles, I also have experience in logistics and inventory management, having served as a 92Y Finance Unit Supply Manager in the Korean Augmentation to the U.S. Army (KATUSA) program. In this role, I managed inventory tracking, procurement processes, and data entry for supply chain operations, which gave me firsthand insight into how data supports decision-making in fast-paced, high-stakes environments.

I am particularly drawn to this position because it offers a blend of technical data analytics, ETL development, and collaboration with business teams. I enjoy not just working with data but also understanding business needs, identifying key performance metrics, and developing solutions that improve processes. Subaru's commitment to efficiency, safety, and sustainability aligns with my own values, and I am eager to contribute my skills to such an innovative company.

I would love the opportunity to discuss how my experience in data analytics, ETL development, and business intelligence aligns with Subaru's needs. Thank you for your time and consideration—I look forward to hearing from you.

Sincerely,

Sangjun Ko
