Hiring Manager

Ipsos

Dear Hiring Manager,

I am excited to apply for the Data Scientist Intern position at Ipsos. As a senior at the University of Illinois Urbana-Champaign majoring in Statistics with minors in Mathematics and Data Science, I am eager to apply my analytical skills and passion for data-driven insights to Ipsos' mission of uncovering meaningful research solutions.

My academic background, coupled with hands-on experience in statistical modeling and machine learning, has prepared me well for this role. As an AI/ML Intern Team Leader, I develop predictive models using Python, applying techniques such as XGBoost, neural networks, and NLP to extract insights from large datasets. My work in statistical consulting, through Illinois Business Consulting and my role as a Course Assistant for STAT443 Professional Statistics, has strengthened my ability to communicate technical findings to diverse audiences. I thrive at the intersection of analytics and business strategy, making data-driven recommendations that drive actionable results.

Ipsos' commitment to using data science to decode consumer behavior resonates deeply with my curiosity for understanding decision-making patterns. Whether building machine learning models, conducting time series analysis, or creating data visualizations, I am eager to contribute my skills in Python, statistical analysis, and predictive modeling to support Ipsos' research and advisory initiatives.

I would love the opportunity to further discuss how my experience aligns with this role. Thank you for your time and consideration—I look forward to hearing from you.

Sincerely,

Sangjun Ko
