Hiring Manager

VusionGroup

Dear Hiring Manager,

I am excited to apply for the Data Science Intern position at VusionGroup. As a senior majoring in Statistics at the University of Illinois Urbana-Champaign with minors in Mathematics and Data Science, I am eager to leverage my experience in machine learning, data visualization, and predictive analytics to contribute to VusionGroup's mission of advancing IoT and data technologies in retail.

My background in data science has been shaped by both academic and professional experiences. As an AI/ML Intern Team Leader, I develop predictive models with Python, working with large-scale datasets exceeding 100,000 entries. I have hands-on experience with machine learning techniques, including classification, clustering, and time-series forecasting using Scikit-learn, TensorFlow, and PyTorch. Additionally, my role as a Course Assistant for STAT443 Professional Statistics has strengthened my ability to present complex data-driven insights to diverse audiences.

Beyond technical expertise, I am passionate about using data to drive meaningful business solutions. My consulting experience at Illinois Business Consulting has honed my ability to extract actionable insights, automate workflows, and design impactful data visualizations with Tableau and Matplotlib. I thrive in collaborative environments and would welcome the opportunity to contribute to VusionGroup's innovative approach to digitalizing retail.

I look forward to the possibility of discussing how my analytical skills and passion for data science align with VusionGroup's needs. Thank you for your time and consideration—I hope to hear from you soon.

Sincerely,

Sangjun Ko
