Hiring Manager
AXIS Capital Research Center
University of Illinois Research Park
Champaign, IL

Dear Hiring Manager,

I am excited to apply for the Data Engineering and Process Support Internship at AXIS Capital. As a senior majoring in statistics with a minor in mathematics at the University of Illinois Urbana-Champaign, I have developed strong data processing, SQL scripting, and analytical skills that align well with this role. This internship presents an excellent opportunity to apply my technical expertise to real-world data challenges in the insurance industry.

My experience in data analytics and engineering includes working extensively with structured and unstructured datasets, applying SQL, Python, and R to clean, transform, and analyze data. As an AI/ML intern team leader, I have developed and optimized data pipelines, implemented ETL processes, and created virtual tables to support large-scale analytics. Additionally, my coursework in statistical consulting and machine learning has strengthened my ability to extract meaningful insights from complex datasets and enhance data-driven decision-making.

Beyond technical expertise, I am comfortable working in collaborative, fast-paced environments that require adaptability and problem-solving. My experience as a consultant at Illinois Business Consulting has honed my ability to communicate findings effectively and work alongside cross-functional teams to improve data processes. Additionally, my research experience in the COVID Information Commons Student Paper Challenge, where I placed 3rd, further reinforced my ability to analyze diverse data sources and develop actionable recommendations.

I am eager to contribute my data engineering skills and problem-solving mindset to the AXIS Capital team. I would welcome the opportunity to further discuss how my background aligns with this position. Thank you for your time and consideration, and I look forward to the possibility of joining AXIS Capital's Research Center.

Sincerely,

Sangjun Ko
