Hiring Manager
Old World Industries
Northbrook, IL

I am excited to apply for the IT Intern position at Old World Industries. As a senior majoring in Statistics with a minor in Mathematics at the University of Illinois Urbana-Champaign, I have developed a robust foundation in data analysis, programming, and emerging technologies—all of which I am eager to apply in a dynamic, fast-paced environment such as yours.

In my role as an AI/ML Intern Team Leader, I led a team to build predictive models using Python and SQL while managing large datasets. This experience not only sharpened my skills in data manipulation, cleansing, and transformation but also gave me the opportunity to explore machine learning techniques and the potential of emerging technologies like AI and LLMs. Additionally, as an Undergraduate Course Assistant for STAT107 and STAT443, I developed comprehensive reports and visualizations using Excel and data visualization libraries, which honed my ability to present data-driven insights effectively.

I am particularly drawn to this opportunity at Old World Industries because of its rich history in the automotive aftermarket. I am enthusiastic about the possibility of combining my technical skills with my interest in automotive processes and heat transfer—areas where I am eager to learn and contribute. I am confident that my strong problem-solving abilities, attention to detail, and commitment to continuous improvement will be valuable in assisting your data analytics and engineering team with report writing, dashboard creation, and process improvement initiatives.

Thank you for considering my application. I look forward to the opportunity to discuss how my background and skills can contribute to the continued success of Old World Industries.

Sincerely,

Sangjun Ko
