Stephanie Brackey
Mayo Clinic
4500 San Pablo Road
Jacksonville, FL 32224

Dear Ms. Brackey,

I am excited to apply for the Stat Programmer position at Mayo Clinic. As a senior majoring in statistics with a minor in mathematics at the University of Illinois Urbana-Champaign, I have developed strong programming, data analysis, and statistical modeling skills that align well with this role.

My academic and professional experiences have equipped me with extensive hands-on exposure to statistical computing. As an AI/ML intern team leader, I have worked with large datasets, utilizing R, SAS, and Python to develop statistical models, manage data pipelines, and perform predictive analysis. Additionally, my coursework in statistical consulting and Bayesian analysis has strengthened my ability to conduct data integrity checks, clean and manipulate structured and unstructured datasets, and produce reproducible research. My experience as a consultant at Illinois Business Consulting has also refined my ability to communicate complex data findings to stakeholders.

Beyond my coursework, I placed 3rd in the 2024 COVID Information Commons Student Paper Challenge, where I analyzed the ****socioeconomic and mental health impacts of COVID-19 in Mexico**** using statistical and geospatial analysis. My research focused on identifying disparities in unemployment, healthcare access, and mental health outcomes, proposing data-driven policy recommendations based on statistical modeling. This experience deepened my ability to apply data science techniques to public health research, reinforcing my interest in using statistical programming for medical applications.

I am particularly interested in this opportunity because of my passion for leveraging statistical programming to improve healthcare outcomes. I am eager to contribute my expertise in statistical computing, data management, and predictive analytics to Mayo Clinic's mission of advancing medical research and patient care through data-driven decision-making.

I welcome the opportunity to further discuss how my technical skills and problem-solving abilities align with this position. Thank you for your time and consideration, and I look forward to the possibility of joining Mayo Clinic's research team.

Sincerely,

Sangjun Ko
