Hiring Manager

Annalect, Omnicom Media Group

Chicago, IL Dear Hiring Manager,

I am excited to apply for the Intern, Data Science position at Annalect, as advertised. As a senior majoring in Statistics with a minor in Mathematics at the University of Illinois Urbana-Champaign, I have cultivated a robust analytical skill set and a passion for transforming complex data into strategic insights. Annalect's innovative approach to leveraging data and technology to drive marketing outcomes greatly aligns with my academic background and professional interests.

Throughout my studies and internships, I have developed hands-on experience in exploratory data analysis, predictive modeling, and machine learning. For example, in my role as an AI/ML Intern Team Leader, I led a team to develop predictive models using Python and SQL, while refining our methodologies to ensure high model performance. Additionally, my work as an Undergraduate Course Assistant in data science courses allowed me to simplify complex analytical concepts for diverse audiences, reinforcing my ability to communicate technical insights clearly.

I am particularly excited about the opportunity at Annalect because it offers a chance to work on real-world projects that directly influence client marketing strategies. I am eager to collaborate with data scientists, strategists, and media buyers to conduct thorough data analyses, build insightful dashboards, and support the development of innovative utilities that drive business success. My proficiency in Python, SQL, and R—combined with my experience in supervised and unsupervised machine learning—makes me confident in my ability to contribute effectively to your team.

Thank you for considering my application. I look forward to the opportunity to discuss how my analytical skills and collaborative mindset can contribute to Annalect's mission of delivering actionable, data-driven marketing insights.

Sincerely,

Sangjun Ko
